

## A radical new move in virtual technology.

*The challenge: To rethink, reformulate, redesign and re-engineer the road race concept from the pavement up. To deliver a greater degree of realism and a sharper edge of excitement. In short, to create the most advanced sensory experience ever developed for an arcade.*

*The result: Cruis'n USA. More than a game, Cruis'n USA is a full-motion virtual experience that's unparalleled in video achievement. Three years in development, Cruis'n USA is the first machine to so perfectly synthesize creativity and technical advancement.*

*The excitement begins the moment drivers take the wheel and encounter Midway's new UltraGrafx™ texture-mapped video display. This fully interactive three-dimensional video system delivers high-resolution detail and complete 360° immersion. Players have never seen anything like it.*

*Nor have they felt anything like the Cruis'n USA three-axis full-motion system. It duplicates every curve, crest and crash of the 2650-mile journey: full-throttle bumps and jumps, heart stopping collisions, twisting turns, skids and breakneck acceleration. To call it a joyride would definitely be an understatement.*

The Cruis'n USA three-way view selector, CD selector, stop-motion button and gear shift are configured for easy access and operation.
